Retool

The fastest way to build internal software

Investor update

SYNTHETIC DEMO DECK for software testing only. Not issued by Retool; figures are illustrative. Not investment advice.

THE PROBLEM

Internal tools take too long to build

- Engineering teams spend months on admin screens, forms and permissions

- Most of that work repeats from company to company

- Teams fall back on spreadsheets and half-built tools

THE SOLUTION

Build internal apps in days, not months

- A visual builder that connects to any database or API

- Permissions, audit logs and hosting are built in

- Engineers stay in control with code where they need it

MARKET

Companies keep building internal software

- Low-code and internal tools are our market

- AI makes internal tools faster to build

- Security and governance matter more every year
